

MOTION INDEX DRIVES

Flexible Positioning System
TR Series

MOTION INDEX DRIVES

An alternative to the extremely high precision and zero backlash TMF and RT series trunnion indexing systems, the TR Series offers a lower cost alternative to applications that require such high standards. Offered in complete head and tail stock standard sets, you have the option to purchase a complete trunnion solution from Motion Index Drives that includes heavy duty constructed base frame, HS/TS riser bases, and fixture backbones.

The TR series is ideal for rollover applications in the aerospace, automotive, defense, construction and mining equipment, alternative energy and railroad transportation manufacturing environments. The TR Series was manufactured to be suited for laser, spot, mig and tig welding applications.

Incorporating the TR series into to your weld cells can be relatively easy by indicating what robot manufacturer you are implementing and the TR Trunnion can be adapted to accept virtually every robot brand.

TR Series

Motion Index Drives' TR series headstock / tailstock trunnion sets utilize a high precision (less than 1 arc minute) planetary gear system mounted in a vertical position complete with mounting plates. TR series Trunnion Index Drives are ideal for moving large masses with smaller units and minimizing your equipment's footprint on the floor. All TR series trunnion units can be ordered with standard or custom frames fully equipped with head and tailstock supports and one-piece base weldments.

Technical benefits for end users

- Long service lives.
- Large thru hole on tailstock for running utilities to fixtures.
- Requires less power than leading competitors.
- Oversized bearings on tailstock for support.
- Directly mount to gear head system mounting plate which eliminates the need for additional pillow blocks.

Options Available

- Special hole patterns in mounting plates on headstock and tailstock.
- Clockwise, counter-clockwise and oscillating index modes of operation.
- Can be ordered as complete assembly with headstock, tailstock and base frame.
- Various gear ratios.
- Variety of encoder or positioning devices.
